

Case Study

London Ambulance Training Centre

Brief

To provide workstations, seating, storage and break-out furniture for London Ambulance's new training centre.

Client

London Ambulance

Site

London

Product Range

Glade Contract

Anyone dialling 999 for an ambulance in London can expect to see it arrive within 8 minutes of making that call. It is a service we take for granted but few of us are aware of the 3 year course that medical students have to undertake before being allowed to come to our rescue.

Working in the fast lane is something they also applied to the refurbishment of a delapidated NHS building which took just 8 weeks from taking over the building to students moving in.

Led by Logistics Manager Kevin O'Sullivan, the building was soon converted to provide 9 training rooms, an administration office, 6 skills rooms where students put theory into practice, a kitchen complete with breakout chairs

and tables and locker rooms.

"We have a long standing relationship with Eurotek who have already helped us furnish our headquarters. The quality of their products along with their ability to produce furniture quickly and willingness to accommodate bespoke units to our requirement meant that we had no hesitation in calling them again." explained Kevin O'Sullivan

Each training room was furnished with 900mm wide standard Glade Contract workstations finished in Oak and Silver, a special lecturn and some storage cupboards and Eurotek partnered Orange Box to supply the Joy chair in the NHS green fabric.

"We are delighted with our new facilities which offer our students everything they need. The new centre will allow us to train over 500 students this year on a rota basis combining theory and practical skills both here and on other sites. Whilst a group of students go off site either to hospitals or driving centres, another will come in to do their theory, so the centre is being used constantly." added Mr O'Sullivan.

Winning factors

Continuity of service from previous projects with London Ambulance

Product quality and ability to accommodate bespoke products

Fast turnaround from order to installation
