

Case Study

Lowestoft College

Brief

To provide a secure furniture solution accommodating 32 students in two newly refurbished classrooms.

Client
Lowestoft College

Site
Lowestoft, Suffolk

Product Range
*Smart Top
Screen Desk*

Bob Saunders from the Estates Department at Lowestoft College was first introduced to the Smart Top mechanism on a visit to the Eurotek stand at the FM Expo exhibition in Earls Court, London.

He was impressed by the security aspect of the Smart Top desk, with the option of a lockable steel CPU holder and desktop. This feature, along with its innovative and space saving design convinced him of its suitability for an on-going project running back at the college.

Lowestoft College was in the process of refurbishing two classrooms, requiring a total of 32 computer workstations. Mr Saunders asked us to quote for the job using the Smart Top workstation with secure

CPU pedestal as seen at the exhibition a month earlier.

The popular Beech and Silver finishes were chosen to accentuate the clean and simple working environment throughout the building.

The order was delivered within an agreed time scale and to coincide with their refurbishment schedule. The furniture was then installed by Eurotek's own, fully trained, installation team.

The overall installation was a success and the classrooms are now up and running, and with Eurotek in mind for future stages of the refurbishment it is safe to say that we have yet another satisfied customer.

Winning factors

The secure CPU option, ideal for classrooms and training suites.

Dual purpose workspace, for both IT and paper based studies
